Brief profile

A current Ph.D. candidate in the Research School of Biology at The Australian National University. I am a molecular biologist/biochemist investigating the functions of proteins involved in plant-microbe interactions.

Education

The Australian National University, Australia Ph.D. candidate in the Research School of Biology	<u>2020 - Present</u>
The Australian National University, Australia B.S. with First Class Honours in Biology. GPA: 7.00/7.00 Awarded University Medal	<u>2019</u>
Flinders University, Australia B.S (Biotechnology) GPA: 6.95/7.00	<u>2016 - 2018</u>

Awards

Hirota Naora award – Best presentation at the RSB HDR conference	<u>2022</u>
CPG award presentation at Combio	<u>2022</u>
Runner-up best student presentation at East Coast Protein Meeting	<u>2022</u>
Postgraduate research award – Australian Institute of Nuclear Science and Engineering	<u>2020</u>
Australian Government Research Training Program stipend	<u>2020</u>
University medal – The Australian National University	<u>2019</u>
RSB director's prize in Honours – The Australian National University	<u>2019</u>
Honours scholarship – Australian Institute of Nuclear Science and Engineering	<u>2019</u>
Chancellor's letter of commendation – Flinders University	<u>2016/2017/2018</u>

Research experience

The Australian National University

PhD candidate

2020 - Present

- Designed and executed experiments to investigate the enzymatic activity of uncharacterized proteins involved in plant-microbe interactions both *in vitro* and *in planta*
- Assisted in the training of new students, including a primary supervisor role for three semester-long undergraduate student projects
- Disseminated experimental results in research publications and conference presentations
- Helped manage ordering for lab consumables. Assisted in routine lab maintenance and organization

The Australian National University

Technical assistant – COVID-19 genomic sequencing

2021

- I was a member of the team responsible for COVID-19 genomic surveillance in the Australian Capital Territory during 2021. I received cDNA samples and prepared multiplexed libraries for Nanopore sequencing.

The Australian National University

Honours student

2019

- The Honours project aimed to determine the function of AvrM14, a protein involved in the pathogenesis of flax rust. This project had a focus on structural biology and linking protein structure to biochemical function.

Flinders University

Research assistant

2018

- Worked both independently and in a team completing various general molecular biology techniques to aid in research projects

Research skills

A non-exhaustive list of the research techniques/tools used during my research career.

- Recombinant protein expression (*E. coli*) and purification
- Fast protein liquid chromatography (FPLC) using AKTA systems
- X-ray crystallography and structural biology
- Agroinfiltration of *N. benthamiana* for transient gene expression
- Various enzyme assays (especially for Nudix hydrolases)
- Plant RNA extraction, purification and RT-qPCR
- RNA-sequencing data analysis
- RNA synthesis, 5' capping, and radiolabeling
- Various general molecular biology techniques (e.g., western blotting, molecular cloning etc.)
- Nanopore library preparation for COVID-19 genome sequencing
- Python programming language (especially for organizing large datasets and data visualization)

Teaching experience

The Australian National University

2022

General microbiology (BIOL2142) laboratory demonstrating

- Teaching and supervising students in microbiology lab classes
- Marking of scientific reports

The Australian National University

2021 and 2022

Molecular gene technology (BIOL2162) workshop tutor

- Providing guidance to, and teaching, students who were completing online zoom workshops covering a variety of molecular biology research techniques

The Australian National University

2021 - Present

Biochemistry and human nutrition (BIOL2171) laboratory demonstrating

- Teaching and supervising students in biochemistry lab classes
- Marking of laboratory reports

The Australian National University

2020, 2022/23

Advanced studies course (SCNC2101) research project design and lab supervision

- Designing and supervising semester-long undergraduate research projects for second-year students

Peer review

Molecular Plant Pathology

2023

Journal of Experimental Botany

2021 & 2022
